

METHOD AND SYSTEM FOR SCHEDULING EMPLOYEES
IN A PATIENT CARE ENVIRONMENT

Abstract of the Invention

5 A system and method for managing a health clinic, and in particular to
managing/scheduling employees to work in the clinic. The system and method relates to
a computer program for computing the needs of patients, determining adequate staffing
requirements and displays these needs and requirements in connection with actual
scheduling values. Thus, the system provides a tool for quickly determining whether the
10 clinic is overstaffed or understaffed, for the entire day based on patient needs, both direct
and indirect patient care needs. The system and method may further use facility
limitation information to provide overall efficiency information.
